"i took clomid on CD3-7

CD3 50mg

CD4 nothing, as it was new year's eve and i'd had some alcohol

CD5 100mg

CD6 100mg

CD7 50mg

a little mixed up, but i took 300mg in total. i was taking pre-natal vitamins and having regular accupuncture. i **STRONGLY** recommend accupuncture to anyone trying to concieve!! i didn't have many side effects while taking the clomid, but i now have several cysts, so that is something to weary of!"

**This success story was quoted from another site.
